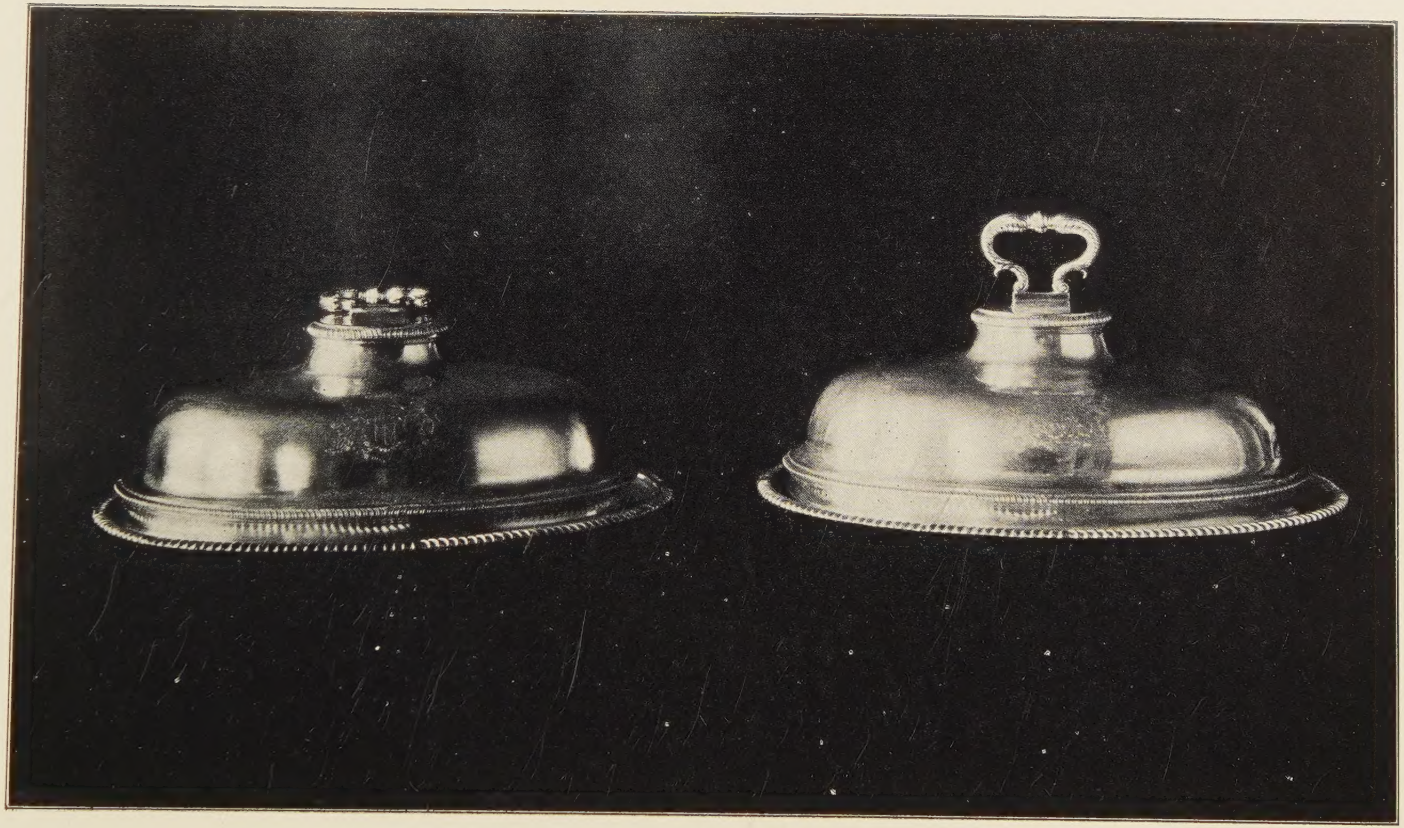
OLD SILVER AND OLD SHEFFIELD PLATE



Courtesy of the Okie Galleries

A PAIR OF PLATTER COVERS BY PAUL LAMERIE, LONDON, 1729

These pieces are free from the over-ornamentation that sometimes marked his work and show the exquisite sense of form possessed by the greatest of English silversmiths.

OLD SILVER *and* OLD SHEFFIELD PLATE

A history of the silversmith's art in Great Britain and Ireland, with reproductions in facsimile of about thirteen thousand marks. Tables of date letters and other marks. American silversmiths and their marks. Paris marks and Paris date letters with a description of the methods of marking employed by the Paris Guild of Silversmiths. Hallmarks, and date letters when used, of nearly all the countries of Continental Europe, reproduced in facsimile. A history of Old Sheffield Plate and a description of the method of its production, with the names and marks, in facsimile, of every known maker

WITH TWELVE FULL-PAGE ILLUSTRATIONS

A LADY

whose home is in Kentucky,

but whose duties and responsibilities have made her name familiar throughout the United States, years ago perceived that in no other class of articles of domestic use were combined utility and great beauty to the degree in which those qualities co-exist in the silver produced in England during the period that began with the accession of George I and ended during the Regency in the early Nineteenth Century. Her unerring taste and judgment, as shown in her own magnificent collection, have made many converts to her belief. As an inadequate attempt to express the obligation we should all feel, and as a tribute of personal admiration,

this volume is respectfully dedicated

by its author

to

MRS. ALVIN T. HERT,

of Lexington and Washington.

FOREWORD

This book has been written with the single purpose of enabling the reader to establish the origin and authenticity of antique silver and "Old Sheffield plate."

If I have gone rather at length into the history of the silversmith's art in England and the laws under which he worked, it is because I deemed it necessary for the purpose in view. Education in the directions indicated is essential to prevent self-deception; there is no danger of wilful misrepresentation by a reputable dealer.

It has not been thought necessary to go into the methods employed in the production of solid silver. Sheffield plate must, however, be approached from a different angle. One who knows just how "Old Sheffield" rolled plate was made and will apply that knowledge to each piece he examines and will ask and answer the question that should always arise: "Was it possible to produce this article without the aid of electroplating?"—will never, if of average intelligence, mistake electroplate for the older product.

Dealers are deceived every day. This we must believe in view of the fact that a large quantity of electroplate is being marketed as "Old Sheffield." If a wider knowledge is possessed by customers, dealers will be compelled to educate themselves.

Mr. Frederick Bradbury, of Sheffield, has written a book describing in the most minute detail every process used in the older art and illustrating every method and tool employed. Its writing afforded Mr. Bradbury pleasure, no doubt, and certainly he

should feel proud of his work, evidencing as it does infinite labour and very great ability.

But, Macaulay said no one but a commentator ever read all of Spenser's "Faërie Queene," and if the seven books of the poem had not been destroyed in Ireland, even a commentator would have baulked.

Hence, I have written just enough to show even a non-industrious reader that the raw material of a maker of Old Sheffield corresponding to the sheet of solid silver in the hands of the silversmith or of copper or nickel silver in the hands of the maker of plated ware presents a uniform colour only on the surface and never at a cross-section. The copper and silver were not amalgamated. They remained distinct but not separate. Every edge of a piece of Sheffield plate must at some time have shown white and red, or white and red and white. That edge had to be masked. How? Never by electroplating: it had not been invented.

I have compiled the tables of marks on solid silver in this book from publications most of which are not readily available to the reading public. The Continental hallmarks (apart from the French) have hitherto only appeared in a German publication—Rosenberg's. The French marks are from Boivin's *Les Ancienns Orfèvres Français*, a costly work practically unknown in America.

It is very important that the collector should be able to identify British provincial silver. "Provincial" as used here includes Ireland and Scotland. This book contains the name and mark of every British and Irish silversmith now known, from the earliest times to the middle of the last century. The value of both English and American silver often depends very largely upon the identity of its maker. For some reason, that is not true of silver of Continental origin unless we hark back to the days of Benvenuto Cellini. It has seemed well, therefore, to give hall-

marks only of the European countries other than the British Isles

Our knowledge of early American silversmiths, incomplete as it is, seems almost static. Some few years ago, the Walpole Society published a book containing the names of a number of silversmiths of the Colonies. Copies are infrequently offered at book sales and bring large prices. My friend Colonel Charles Rynesson has given me what we believe to be the only existing copy of the book his late father, Mr. P. A. Rynesson, privately published. It contains data concerning some hundreds of silversmiths not mentioned in the Walpole Society book. Mr. Stephen G. C. Ensko has also published a book containing many names and marks of old and comparatively modern "silversmiths" of this country. No doubt many of his "silversmiths" were only dealers —a fault with which this work also may be charged and for which a reason is given in the proper place. The curious reader will find many very valuable biographical notes in Mr. Ensko's book, and I am indebted to it and to the book of *American Church Silver* (a wonderfully accurate work) for much information I have used in these pages.

That paragon of American collectors, Judge Alphonso T. Clearwater, and Mr. Henry Davis Sleeper, who generously presented his collection of Paul Revere Silver to the Boston Museum of Fine Arts, have given me authoritative decisions as to the distinctions between the marks of the Reveres, father and son.

By following the British and Irish date letters as given by the late Sir Charles Jackson, I have avoided the mistakes made by Chaffers and Cripps and copied by American authors.

OLD SILVER AND OLD SHEFFIELD PLATE

CHAPTER I

Old English Silver

FROM the year 1300, it has been compulsory in England to have an official mark impressed upon silverware before offering it for sale. In that year, a statute of Edward I provided that "no manner of vessel of silver depart out of the hand of the workers until it be essayed [*sic*] by the wardens of the craft and further that it be marked with a leopard's head." To receive that mark it must be of "esterling allay [*sic*]." From this one would gather that the belief that the word "sterling" was derived from the name of a North German tribe, the Esterlings, who were noted for the uniform fineness of their silver coins, is based upon fact. Sixty years later, it was provided that the goldsmith or silversmith should have a "mark by himself." In neither of these enactments is there any mention of the lion passant which later was to be the sterling mark of every assay office in England, though the use of the leopard's head was, with certain exceptions, shown in the tables of marks, restricted to articles made in London.

We learn, however, from an indictment of the attorney general that in 1597 "Her Majesty's lion" had a legal status as a mark of sterling silver. Though that is the earliest mention of the lion in legal history, it is found on silver with the date letters for 1543, and Sir Charles Jackson says it was never absent "after 1545," a palpable error of Sir Charles, who, no doubt, intended that his statement apply only to silver produced in London.

In the earlier days, symbols, not letters, were employed by

the English silversmiths to identify their work. In 1515, we find apostle spoons with a "radiant" (fringed) letter S, and in 1545 we find a monogram. Late in the reign of Elizabeth, we find an initial employed with increasing frequency, and toward the end of that reign the silversmith usually used the initials of both his Christian and his surname. This practice continued until 1697, when the statute changing the standard of silver was passed. This act, which raised the standard of silverware above that of the coinage, was designed to prevent the absorption of the silver money in the arts. It provided that the fineness of the silver employed must be 11 ounces, 10 pennyweights to the pound Troy (12 oz.) instead of 11 ounces, 2 pennyweights (.925) the sterling standard. It took more than twenty years for the lawmakers to discover that their enactment was futile, as the silversmith could meet the new requirement by simply adding a little pure silver to his melting coins. While the new standard was compulsory, silver was marked in a distinctive way. John Cox no longer marked his silver J. C.: he must use the first two letters of his surname—Co. The lion passant was superseded by the lion erased (the head and neck only of the lion), and the leopard's head was replaced by the figure of Britannia enthroned. In 1720, the old standard and the old system of marking came again into use through the repeal of the statute of 1697, but the maker could, if he wished, continue to use the higher standard, in which case the Britannia hall marks would be affixed, though he could no longer mark his wares with the commencing letters of his surname. He must use his initials, unless it was that, prior to 1697, he used some other mark (a single initial), in which case he was, for a short period, allowed to use his old mark. I revert to this subject in more detail hereafter.

The art of silversmithing doubtless came into England through the development of Christian monastic institutions. There is no

evidence of the art having been established in the British Isles during the four centuries of Roman occupation, though the cloth of Britain became famous during that period.

Prior to the Norman Conquest, the work seems to have been confined to the churches. The patron saint of English goldsmiths was the monk Dunstan, who lived in the Tenth Century. He became an archbishop and the chief counsellor of the Saxon king, Edgar.

With the advent of William the Conqueror, it would seem reasonable to suppose that a higher standard of living was brought into England and that the invading nobility would bring with them silver and gold utensils. If they did so, none of them survived the vicissitudes of the intervening centuries. Up to the time of Henry VIII, practically all specimens of the silversmith's craft were in the possession of ecclesiastical bodies.

It is true that, as early as 1238, in the reign of Henry III, an ordinance was passed that shows that goldsmiths were then recognized as a body, but it would seem that only a negligible amount of their output went into the hands of other than the Church and royalty. The reason for that is found in the fact that there was very little raw material in England. Silver has never been found there in the earth in its "free" form, and the small amount that was locked up in refractory ores, such as galena, was unavailable because of the ignorance of any method of separating the precious metal from its base associates.

Henry VII is reported to have died possessed of £1,800,000 in gold and silver, but that monarch's system of appropriating his subjects' money under the name of "benevolences" was so thorough that it is more than likely that his possessions represented the bulk of all the money in England. His successor, Henry VIII, died almost penniless, and probably for that reason we do find a few silver articles of domestic use that were made during the reign of that monarch.

During the reign of Henry VIII the silver currency was so debased that the coinage contained little more than a fourth of its proper content; in other words, it contained about 25 per cent. of silver compared to $92\frac{1}{4}$ per cent., which was the sterling standard. Yet at no time, from the commencement of the legal regulations of the manufacture of silver plate, was it lawful to make silver wares of less than the sterling standard.

When we remember that in the reigns of Henry VIII and Edward VI the silversmiths found their only source of raw material in this debased coinage and the very large purchasing power of that currency, we can understand the scarcity of "Tudor" silver. The reason that, prior to the disestablishment acts of Henry VIII, ecclesiastical institutions (colleges fall within this group) monopolized the ownership of silver is found in the relationship of local monastic institutions to the gentry of their neighbourhoods. If the wealth of a rich English subject were not taken from him by the Sovereign during his life, it would be apt to pass to the Church upon the owner's death. The terrors of hell were very real, and priestly intervention alone stood between the dying and eternal torments.

There was an amusing conflict between the individual and collective belief. The former deemed it the part of wisdom to give all that he had to save his soul. His neighbours deprecated his action, though, as individuals, each would do the same. Various statutes of "mortmain," commencing in the reign of Henry III, were intended to cope with this situation, but none, save the last—that of Henry VIII—was effective.

The idea of the confiscation of church wealth did not originate with Henry VIII; it had often been proposed before, not by kings or their ministers, but by the people. Such a measure nearly succeeded in the reign of Richard II. The King at first favoured the measure, but withdrew his support under threats from Rome.

It is to be noted that the oldest hall-marked piece is an ecclesiastical piece, and it is doubtful if any piece of silver that could be properly termed a domestic article could be found with an earlier date than 1515, although a few apostle spoons have come to light that were made toward the end of the Fifteenth Century. Corpus Christi College, Oxford, has a covered silver cup that was presented to Catherine of Aragon by her loving husband in 1515–1516.

It is doubtful if we can explain the scarcity of even church silver in the pre-Elizabethan period of English history by stating that the monasteries had been depleted of their silver by Henry VIII.

The probabilities are that there was very little silver of any kind in England until the days of Drake and Hawkins, who, with their fellow buccaneers, encouraged the movement of silver from the newly discovered Western world to the British Isles.

The capture of silver-laden Spanish ships, not only while they were en route from Mexico, South America, and the West Indies, but of ships in the English Channel which were taking supplies from Spain to Holland during the reign of Elizabeth, inaugurated an entirely new era. Silver domestic articles were still far from common, yet we are told by the Reverend William Harrison, who wrote *The Description of England* as it fell under his observation from 1577 to 1587, that rather late in the reign of Elizabeth certain noble families sat at table with as much as two thousand pounds' value of plate spread before them.

The coinage was restored to its legal standard early in the reign of Elizabeth. Apart from the fact that this was evidence of an increased supply of silver within the realm, the fact itself would stimulate the industries of the silversmith.

After the apostle spoons, we find with increasing frequency during the Sixteenth Century spoons more clearly intended for

domestic use. They have fig-shaped bowls, with four-corner columnar baluster stems, and terminate in a knob which could be used as a seal. The knobs, or finials, are circular or hexagonal.

So-called "rose water" bowls appear at the beginning of the Sixteenth Century, but their original purpose is not clear. At the same time we find tall pedestal salts. They are grand affairs for colleges and the rich "livery" corporations of London. We find a few Elizabethan salts, evidently intended for domestic use. They are oblong, troughlike affairs, something of the shape of the trencher salts made three centuries later, except that they are without pedestals. They are very rare.

During the Sixteenth Century, much church silver was made: patens, communion cups, chalices, and tazzas (small saucers or flat cups with handles and mounted on a stem and base).

The first rat-tail spoon we find bears the mark of 1674. It had a flat stem and a trifid end, i.e., an end divided into three sections like a fragment of a clover leaf.

We find an English three-prong fork—only one—made in 1678. Silver snuffers appear at this time. Tankards, all of silver, had become common in the reign of Charles II, and late in the reign of that monarch toilet sets and toilet boxes were introduced, no doubt a French innovation.

Some two hundred years before, horn beakers had been made with silver bands. That form was preserved in the silver mugs and tankards of a later period, which were ornamented with silver bands, reminders, like the back buttons on a frock coat, of a period when they were of practical use.

In 1683, we find a large oval silver dish, no doubt intended for use upon the table, and about this time silver dinner plates crept into use. There are two in London, dated 1687. In the reign of Queen Anne, and during all the subsequent years, they were common. The author knows of but two or three tea kettles with

EARLY ENGLISH SPOONS

Commencing at the left, the first nine spoons with fig-shaped bowls are of the reigns of Elizabeth, James I, Charles I, and Charles II. The five spoons with trifid ends and rat-tails are of the reigns of Charles II, James II, William and Mary, and Queen Anne. The smaller of the two pipe-handled spoons was made in 1690; the larger one in 1716.

stands and spirit lamps, made as early as the reign of Queen Anne. One sold in America recently for $5,500. This seems to be a fair price, as the writer saw one in Scotland at about the same time, upon which a trade price of £700 had been set. Tea and coffee pots became common in the reign of Queen Anne. Porringers and caudle cups came on the scene in Elizabethan times, and those of the early Eighteenth Century are very common. The fashion of making complete tea or coffee services seems to have occurred to American silversmiths rather earlier than it did to the English members of that craft. I have never seen a complete three-piece tea set of the same make and date letter and of British origin that was earlier than 1790, and with one exception complete tea and coffee sets seem not to have been made in England before the early years of the Nineteenth Century. The idea of making tea kettles to match the tea sets is a Victorian one. The exception is an authentic three-piece tea set of the time of Queen Anne (1702–1714) sold recently at Christie's in London. No doubt it expressed the idea of a silversmith or customer who failed to create a fashion. No other instance is known to the writer. Replicas of the Queen Anne set are now manufactured and sold.

The source of privately owned silver must have been considerably augmented during the reigns of James I and Charles I. Much of this, however, was destroyed during the Civil War, and it seems that, during the Commonwealth, the production of articles of luxury was discouraged. With the inauguration of Charles II, the trade of the silversmith and goldsmith revived and has flourished ever since. In 1697, there must have been three hundred master silversmiths in London alone, and when one considers that each silversmith employed a number of helpers and apprentices, we can understand that there must have been an enormous output of silverware.

In the reign of Queen Anne, silver domestic utensils were in common use, but, from an artistic standpoint, the silver of the period of that queen leaves much to be desired. We hear much praise of the simplicity of "Queen Anne" silver, but it is an unthinking chorus and rests on no more solid foundation than the admiration expressed for the writings of Laurence Sterne. The candlesticks gave promise of beauty, but they were so small that they lacked dignity and impressiveness.

In 1697, William Hogarth was born. It is known that, in 1720, after having been apprenticed to an English silversmith, he was engaged in engraving silver plate. He became a very famous artist, but it is certain that he never lost touch with the trade with which his youth had been identified. In fact, we know that he designed many pieces for London silversmiths.

In 1745, Hogarth painted that admirable portrait of himself with his dog Trump which is now in the National Gallery in London. In a corner of this he had drawn on a palette a serpentine curve with the words "The Line of Beauty." This was merely a tangible expression of the hitherto undisclosed influence that Hogarth had imposed upon the designers of the preceding twenty years and which was to continue until the Adam Brothers, with their meretricious neoclassicism, captured the public fancy.

During the Hogarthian period—1720–1760—the most exquisite silver the world has ever seen was produced, and in enormous quantities. The geometric figures with straight lines and acute angles of the Queen Anne period gave way to beautiful curved outlines with simple but graceful ornamentation, with none of the stereotyped features that marked the succeeding "Adam" period.

Of course, Hogarth alone could not have brought about this

revolution. It was a happy coincidence that there were many talented and artistic craftsmen in London who were his contemporaries. Some of these were of French Huguenot birth or origin and brought to their trade a refinement that was tempered and strengthened by rugged and less artistic styles than prevailed before this period. An outstanding example is supplied by Paul Lamerie, who worked during the reign of Queen Anne, George I, and George II. He produced pieces of wonderful beauty. He also produced some very ugly pieces. This part of his output may be explained by the fact that he no doubt had mandatory commissions to reproduce silver of the same type as that owned by his patrons' forbears.

Much silver bearing Paul Lamerie's mark is now on the market, and all, beautiful and ugly alike, brings high prices.

Ayme Videau was another great silversmith who was also a great artist. William Fawdery, Robert Abercrombie, and Peter Archambo are names distinguished in the reigns of George I and George II.

The rat-tail spoon, which had originated in the reign of James II and went out of fashion in the reign of Anne, was again made in 1750, and these spoons are commonly found bearing the date letters for the latter half of the Eighteenth Century. Because of a present demand for them, a large number of authentic spoons of the period of George II and early George III are now having tails added to them by clever English artificers. The cost to the antique dealer for each additional caudal appendage is only about three shillings.

Early in the Nineteenth Century, the people of England were obsessed with the desire to encrust every piece of silver they could find with excessive ornamentation. It happened that even during the reign of Queen Anne some beautiful, straight-sided coffee pots were produced. There was also produced at the same time a much

greater number of ugly hexagonal and even octagonal coffee pots. The beauty of the former lay in the fact that they presented an unbroken curved surface. Those that survived to the period 1807–1815 were seized upon almost without exception and marred by decoration. This decoration was so indiscriminately applied that in many cases the hall marks, if they were on the side of the vessel, were wholly or partly obliterated. The ugly, angular pieces did not lend themselves to this treatment and have survived, untouched. A straight-sided George I coffee pot standing eleven inches high, if in its original condition, is worth in the neighbourhood of $500. When "re-chased," they sell in the London auction rooms for about one fifth of this sum. The collector must not jump to the conclusion that every piece of silver the hall marks of which have been partially obliterated by chasing is an example of ornamentation put on out of period. It was quite common for silversmiths to send their work to the "hall" to be marked and then chase it afterward.

There is no nicer criterion of a collector's skill than his ability to determine accurately whether or not the ornamentation upon a piece of English silver is contemporary with its birth.

In the year 1300 a statute was enacted which provided that no gold or silver should be sold until it had been assayed by persons duly authorized so to do. Such assay was to be evidenced by impressing upon the article tested a leopard's head. Threescore years later, it was provided by another statute that each goldsmith should have "a mark by himself, which mark shall be known by them assigned by the King to certify their work." This law also provided that the silversmith should not put his mark upon his goods until *after* they had been examined by the proper officials. This feature was found to be attended with inconvenience, and although I have been unable to find a statute that abrogated the one last quoted, we know that in 1583 the

OLD ENGLISH SILVER

The caudle cup shown at the left was made in 1706. The covered dishes are examples of the work of Paul Storr, latest of the great English silversmiths.

workman affixed his mark *before* sending it to the assayer's office, and that custom prevails in Great Britain to-day.

The fashion of denoting the year of manufacture by impressing a date letter, to be determined by the authorities, was probably inaugurated in the reign of Edward IV, and we find that the oldest "hall-marked" English silver pieces are a chalice paten bearing the marks of a leopard's head, the date letter "B," and maker's mark. It has now been determined that that date letter denoted the assay year 1479–1480. As the assay years have from the earliest time commenced in the month of May in each year, it is always necessary to employ figures representing two years in order to designate any particular twelve months represented by a date letter. Up to 1544, the leopard's head served a dual purpose. It certified that the article was silver of a certain standard and that it was made in London. In that year, the lion passant was employed as a stamp for silver of standard (.925) fineness, and thereafter the leopard's head only designated the place of origin.

The use of the lion as a sterling mark was not restricted to London, but for a long period of time, though used in various parts of England, its employment was not universal. Nor was the leopard's head restricted to London, but when employed elsewhere was accompanied by the distinctive mark of the local assay office so that no confusion would ensue.

It is unnecessary now to go into greater particulars, as the reader can get detailed information upon this point by the perusal of the tables of date letters.

CHAPTER II

Frauds and Transformations

THE collector of Old English silver is confronted with two perils: 1. He may purchase a "dud" with forged hall marks or a "transformation," a term employed to designate an altered genuine piece of silver in which the metamorphosis has been concealed; or (2) he may reject a perfectly good piece from an excess of caution or unhealthy suspicion. The latter is the more common error.

If he adopts the rule never to purchase an unauthenticated piece in which the "antiquity" is the preponderating element of value (i.e., apostle spoons, Elizabethan or Tudor silver), the first danger disappears. The truth of this proposition is apparent upon brief consideration. A forger will starve if he adds a hundred dollars' worth of labour to fifty dollars' worth of silver and sells the finished product for seventy-five dollars. Should he be guilty of this folly, the purchaser will have secured an article worth more than he paid. A corollary to this proposition is that Georgian marks are not forged for the same reason that a bricklayer will not work for five dollars a day when he can get twelve. It is easier to put a credible Charles I mark on a piece of silver than to represent the period of George II, and the Stuart piece would, if genuine, be worth six times as much as the one made a century later. I say "easier" because the later records of Goldsmiths' Hall are more complete than the earlier ones.

Like most rules, this has exceptions arising from peculiar conditions. Paul Lamerie worked in the reigns of the first two

Georges. Authentic pieces by this great silversmith bring such high prices that a forger may be tempted to imitate his mark. Fortunately, the skill required to reproduce the beauty of that master's work as shown in his best pieces is so rare that hitherto the mark alone has been successfully copied and only the inexperienced have been deceived.

A year or so ago, there arose an inexplicable demand for skewers. The price for genuine ones—even those made as late as 1790—rose from $1.25 an ounce to $5.50. Little silver and no skill were required for their production. Thousands of fakes were turned out. I received a consignment of two dozen all bearing the mark of the same maker and the date letter of one year, 1797. My consignor had been tricked. I sent them back. The purchaser who followed the rule I have laid down, "Do not pay more than the intrinsic value for an unpedigreed article," would have been amply safeguarded.

A short time ago, the tremendous demand for silver place plates and their consequent scarcity prompted a forger to make a large number of them bearing the mark of Paul Storr, a prominent London silversmith who commenced his labours in the last decade of the Eighteenth Century and lived into Victorian times —or nearly so. His work is much sought and commands high prices. Some of the forged plates were sold to an American dealer, who became suspicious and took them to Goldsmiths' Hall, where they were pronounced spurious and the forged marks defaced. If a Queen Anne mark had been counterfeited, the selling price could have been doubled and the "Hall" might, probably would, have refused to stamp them as forgeries. The records of the guild are perfect for 1807; for the period a century earlier, their archives are not so complete. The marks of many makers of that period who undoubtedly were duly registered are missing from the records as they survive to-day.

"Transformations" are taken from the rule regarding fakes with forged marks for the reason that fraud is not necessarily connected with their birth. Frequently, the transformation is effected with innocent motives. One may own a silver tureen lining bearing the mark of a famous maker and not have the tureen in which it was intended to rest. A silver base is made and attached, and a beautiful centrepiece is evolved from a piece of metal which, because of its shape, would not retain an upright position upon the table. The hall marks and maker's mark are still plainly visible when the reconstructed piece is viewed from below, and, if the owner parted with it, a purchaser might think that he had acquired an original piece.

The foregoing is an example of a "domestic" "transformation." The commercial transformations are common enough; desk sets from unfashionable cruet stands and salad servers from large spoons are examples most frequently seen.

Many hundreds of pairs of "salad servers" bearing authentic marks of the George III period are sold in this country. Originally, they were serving spoons; their bowls have been elongated and prongs cut in one of the pair. They are sold for utility purposes and not as cabinet specimens. They are imported in such numbers that the price for which they are sold is little if any more than the cost would be for modern articles of corresponding weight and they *are* hand-wrought silver, antique, and admirably adapted to their new purposes. It is very doubtful if salad servers as we identify them were known in Georgian times. Forks of all kinds were scarce. Their purpose seems not to have been understood either in England or her colonies until we had well advanced into the Nineteenth Century. It is true that Queen Elizabeth used them (or exhibited them). They were exotic then; of Italian origin. It is also true that we occasionally come across sets rather late in the Eighteenth Century; one set was

found in Norfolk bearing Queen Anne marks, and the author has seen one or two sold in London auction rooms of that early period. Yet the outstanding fact is that whereas now the average household has about as many forks as spoons of modern make, we are offered a thousand Eighteenth Century spoons to one fork of the same period. Political history of the United States teaches us that when John Adams represented this country at Versailles, he and his wife Abigail (the most "advanced" woman of her day) were struck with the cleanliness and utility of the use of forks at the table. When Adams returned to the new republic, he brought forks with him and put them upon his table when guests were entertained as well as when he dined alone. This imprudence nearly cost him the presidency. It was first whispered by his friends and then shouted by his enemies that he had abandoned the ways of democracy.

There is a glut of Georgian spoons; the creation of "salad servers" is helping to reduce the surplus.

Recently writers have exaggerated the dangers in purchasing English silver. Do not believe that "if one is offered by a dealer an antique silver piece much below the current price, it may be an indication that something is wrong." It may be that the dealer is unwise or "hard up." The low price rather tends to negative any presumption of fraud, as it eliminates motive, always a principal factor in wrongdoing. My advice is to buy at once if the price is less than it would cost to produce the article and if the article be one that is desirable if genuine. The matter of provenance can be settled afterward. If you must trust your dealer, you should remember that ability is much more important than honesty. Crime is always a mistake, but dishonest persons are not always fools. A roguish dealer usually realizes that to stay in business he must "ride straight," but there is no protection from a fool. A short time ago, a dealer in London offered me

a Queen Anne porringer for £3. I promptly bought and paid for it and then asked why it was so cheap. He said "because it is not marked." It had been made by John Porter, London, 1703. The marks were plain but in an obscure position.

A recent book on this subject warns us: "Articles made since the time of Elizabeth, with only a maker's mark, should be avoided, although the unscrupulous dealer will show you in some book of reference that it is the mark of a celebrated silversmith." So will the scrupulous dealer. Nothing is more certain than that the piece is *not fraudulent* if so marked. My advice is to buy it if the price is low, measured by the intrinsic worth of the article. It may be "Early American"! No forger would bother making a piece that he could not sell except without profit. The penalty for simply copying the dealer's mark and marketing a piece so marked was death, if we hark back to even so late a date as 1820. At the present time, obtaining money by means of "false token" is still a felony and is punishable with a long term of penal servitude. That the forgers of hall marks and makers' marks were prosecuted as violators of the statutes regulating the marking of silver instead of proceeding under the common law of England, is an instance of the tendency of the crown prosecutors to avoid proceedings that would if successful result in the infliction of barbarous penalties. When death was the punishment of crimes now regarded as trivial, judges and prosecutors alike sought to make its infliction as infrequent as possible. Hence the myriad of "technicalities" which a defendant could once invoke, now swept away as the treatment of convicted criminals has become more consonant with an enlightened age.

The absence of the hall marks on an English piece marked only with the maker's punch has two or three reasonable explanations. One is illustrated thus: A tray is shown to me in Washington by a travelling salesman. It bears the mark of Richard Rugg. Rugg

was a silversmith of the latter half of the Eighteenth Century, in London. I have had many of his trays; he made little else. This tray bore his mark in three places. It was indubitably a piece of Rugg's handiwork and of the period indicated by his name. Since Elizabethan times, the maker's mark is punched before taking it to Goldsmiths' Hall. In this case, Rugg had made a trifling error in his alloy, in excess of the legally allowable variation, and the "Hall" had refused to mark it. It was still a perfectly good tray for the Rugg family. Perhaps Rugg differed from the conclusions of the authorities and added two more punches to emphasize that fact and put the tray in use. A century and a half later, the tray reached America. The other explanation applies with more force to articles made after 1784 (when the tax upon silver ware was introduced) and intended for export. Hall marks meant so little to our ancestors in this country that Low, Ball & Company (Boston, *circa* 1810), who were the largest importers of English silver of their time, found it necessary to stamp "Coin silver," "Guaranteed by Low, Ball & Company," upon fully hall-marked pieces of silver, made by such well-known makers as the firm of Chawner, Ely & Fearn of London. The author believes that one reason for the large number of pieces attributed to unknown American makers is found here. Pieces made for export were unmarked and, consequently, untaxed.

When one considers that there was a market in America in Colonial and early post-Colonial times for the products of English silversmiths, and that taxes could be evaded without diminishing the sales value of the goods by exporting them without official stamping (a drawback, for tax paid on goods subsequently exported could be successfully claimed, but its collection involved a good deal of trouble), and that such action was lawful, it would seem advisable to look through the lists of British marks wherever American identification cannot be made and the mark consists

of only two initials framed (cartouche, circle, rectangle, oval, etc.).

Writing upon this subject, Sir Charles Jackson says:

> From 1597 until 1675 there appears very little of interest to relate concerning the London Goldsmiths' Company. There is not much evidence of any efforts having been made to enforce the old-time laws and ordinances with references to the obligation to submit all gold and silver wares to their assayer's "touch", and it seems probable that a large number of goldsmiths in London and the provinces . . . sold wrought plate without being assayed or marked, other than with their own stamp.

To pass intelligently pieces purporting or represented to be of early English origin, it is necessary to have a general knowledge of all British provincial as well as the London marks.

Many beautiful and very valuable pieces of British silver have neither the leopard's head nor the lion to identify them. You may come across a spoon marked on the shaft only with a scallop shell and the letters IA, AA, or RS, or with the shell alone. It will have been made in Poole, a town in Dorset, England, *circa* 1540, 1560, 1580, or 1620. It is well not to remember dates, but one should know the shell mark and that it was not used after the reign of James I (1625).

Sixteenth Century silver of the finest quality was produced in Norwich; and York had an assay office and Goldsmiths' Guild in 1563. The earliest known Norwich piece is a communion cup of 1590. It is marked with a castle with a lion beneath, both in the same shield, and a sea gull also in a shield. The lion designating sterling was not used there until 1610.

Some time ago, the writer purchased—not as an antique—a very well-made covered silver tankard of Queen Anne design and bearing on its base the lion erased, figure of Britannia, and the date letter for 1697. The maker's mark was Rc. A hopeless combination of letters if intended to represent the beginning of a surname. The piece was a continental forgery, probably Dutch.

Courtesy of the Okie Galleries

TWO EXAMPLES OF "TRANSFORMATIONS."

The pitcher was originally a tall tankard or "can" made by Edward Vincent in London, 1706. Its lower part has been "belled" out and the spout and decoration added. The handle is a replacement as shown by the absence of a maker's mark upon it. The only original part of the desk-set is the base or floor, originally a plain platter made by Fred Kandler, London, 1744. Horace Walpole had his silversmith make it into its present form. The rail, bottle-holders, tops, candlestick, snuffers and feet would, if genuine, all be hallmarked; they are not. The hallmark on what was a platter was originally placed upon a flat surface; it now appears partially upon the curve of the groove. It would have been physically impossible to "punch" it in that position.

If the fabricator had used R followed by a vowel or the letter h the fraud might have gone undiscovered.

Though the average intelligence of the successful dealer in antiques is high, many, unfortunately, have not the mental equipment and training necessary for the acquisition of a broad general knowledge so essential to sound deduction from visible facts. The average professional man, even without practical experience, would devote more time and thought to the provenance of a piece of silver and reach a sounder conclusion.

"This is a box for postage stamps; it is over a hundred and fifty years old!" The speaker made his living buying and selling antiques and sold his "expert" testimony. The hall-mark date was 1907, and everyone but an "expert" knows that adhesive stamps were first used in 1840.

A church bazaar sent one of their donations, a transparent green stone, to a pawnbroker for classification and appraisal. He had carried on the business for fifty years and made a specialty of precious stones. He pronounced the green crystal "trash." It was therefore sold for $25. "The purchaser put it before an emerald glass, through which a genuine stone will glow with a dull red light and found that he had a gem. He sold it for $1,500 to a New York jobber, who no doubt doubled his money. The pawnbroker had never heard of the emerald glass. Establish the provenance of your own pieces in order to get the most fun and the most profit from the game.

Though the higher (Britannia) standard of silver ceased to be compulsory in 1720, it has never gone completely into disuse. Once in a while you will come across a piece of silver bearing a maker's mark consisting of a single letter and a later date than 1720; this marking had been comparatively common forty years earlier, but of course had been discontinued during the period of 1697–1720 when the two first letters of the surname

had been used as the statute directed. The statute of 1720, repealing the "Britannia" law of 1697, provided that thenceforth the maker must use his initials "unless a different mark had been used by him" prior to 1697. This provision was repealed in the early years of George II's reign, and the use of two initials was made compulsory without exception. During the interim, however, a few dealers had reverted to their ancient custom of using a single initial. This proves a trap for the overcautious collector who may too rashly reject a valuable piece marked with a single initial.

Every year after 1720 some dealer made Britannia standard silver plate; for the most part, they were presentation or "legacy" pieces. Though the date letter and shields showed they were not of the 1697–1720 period, the presence of the lion erased and the figure of Britannia caused purchasers to deceive themselves. Shown a piece thus marked by a non-committal dealer, the customer would hurriedly purchase the article in the belief that the vendor was ignorant. When the modern character of the purchase would be discovered, the dealer would be described as a "crook." The dishonesty was often solely on the side of the buyer. Not always.

Of course, the presence of the King's head on silver made during the period 1784–1890, tended to preclude any such mistake, but after the later date the increase of Britannia marked silver was stimulated by the disappearance of the distinguishing feature and the resultant market with unscrupulous dealers who lay in wait for the "smart-Alecks."

In Devonshire, last summer, an antique dealer handed me a modern silver mustard pot bearing the Britannia marks. "'Ere is a piece I cahn't make 'ed or tail of. Wot do you make of it?"

"You ought to be able to make head or tail of it, for when you showed me a piece exactly like it two years ago, and made the

same remark, I told you that it was made in London by —— Brothers in 1925."

"Ow! You're the gentleman wot was in 'ere two years ago. Glad to see you again."

And the piece went back on the shelf. He bought them by the dozen.

The enormous advance in the price of antique English silver within the past few months has somewhat altered the conditions upon which certain statements in the earlier part of this chapter were predicated. Forgeries of the late Eighteenth Century and even early Nineteenth Century are now much more common than formerly.

A particular brazen example was seen by the writer while this volume was in the press. The collar of the lid of a Paul Storr kettle had been taken from the original piece and attached as a base rim to a kettle of Continental origin which was unmarked or from which the marks had been removed. An original Paul Storr lamp had been found and placed in a silver stand (unmarked) and the combination was offered to me—as a genuine Paul Storr kettle, lamp, and stand! It was quite usual to omit the marking from a lid collar so that the robbery of the original Paul Storr kettle did not impare its value. Naturally enough, the date letters of the added base-rim and the lamp did not correspond, but that was a small matter compared with the omission of all hall marks from the lid and body of the kettle itself. Never before had I seen such confidence in the success of a fraud based upon such an airy foundation of deceit.

CHAPTER III

Marks on London Plate

Examples of the Leopard's Head Mark Found on Plate of a Date Anterior to 1478.

(The Ascribed Dates are Approximate.)

Date. (*about*)	Mark.	Article and Owner.
1390		Spoon with hexagonal stem and acorn knop: in the Author's collection.
1400		,, ,, "dyamond poynt" at end of stem: ,, ,, lion sejant ,, ,, } Mr. J. H. Walter.
1450		,, ,, "dyamond poynt" ,, ,, : Lord Hylton.
,,		,, ,, ,, ,, ,, ,, : Mr. J. H. Walter.

Date.	Marks.	Article and Owner.
c. 1470		Spoon topped with seated figure of Our Lady; leopard's head in bowl, the other mark on stem: } Mr. J. H. Walter
c. 1485 [probably]		Pre-Reformation Paten: Hartshorne, Derbyshire. (The B is probably the maker's mark.)

The marks shown below have been found upon an apostle spoon. The A may designate the first year of the following cycle.

1478-9?

In 1697 a law was passed raising the standard of silver from .925 (sterling) to .958 henceforth to be known as the "Britannia" standard. The same law changed the markings as shown in the column to the right and also provided that the silversmiths should use the first two letters of their surname as a mark and not their initials as theretofore. The law was repealed in 1720. The standard for coin of the realm was not changed from sterling.

Examples of makers' marks of the period 1678–1716 are shown on pp. 58 *et seq.*

1793-4	,,	s	,,	,,	I·W R·G
1794-5	,,	t	,,	,,	W·T
1795-6	,,	u	,,	,,	T·E

* The author has also noted the date-letters f of 1781-2, and the k of 1785-6 in shields with rounded bases, similar to those of the g, h and i of 1782-3 to 1784-5, as well as in shields with pointed bases as illustrated above. On the other hand, the g and h of 1782-3 and 1783-4, are sometimes found in a shield with a pointed base as in the shield for e of 1780-1.

†On some articles dating from 1784 to 1830, the shield enclosing the date-letter has a rounded base, and the lion passant is sometimes found in an oval stamp.

CYCLE XVII.

FIVE STAMPS AS BELOW.

	LEOPARD'S HEAD CROWNED.	DATE LETTER.	LION PASSANT.	KING'S HEAD.	MAKER'S MARK.
1796-7		A			SP
1797-8	,,	B	,,	,,	RC

1813-4	,,	S	,,	,,	IC WR
1814-5	,,	T	,,	,,	SH
1815-6	,,	U	,,	,,	LP GP

Notes for p. 28.

*Solid gold articles are marked with the leopard's head and lion passant as 1696 and not with the figure of Britannia and lion's head erased.

Variation of lion passant occasionally found on plate of 1679 to 1686.

1695-6 ,,

Notes for p. 29:

It is very important to note the variation of the date letter, leopard's head, and lion passant for the year 1726–7 of this cycle. This variation was also found by Sir Chas.

1727-8 
Jackson, but the author has found the same variation for the year 1730–1 on authentic specimens and he has no doubt that date letters in square blocks were used alternatively with the conventional shields to the end of the cycle (1735–6). When new dies were made in 1736, no doubt this anomalous fashion of enclosing the date letter was discontinued.

H. P. O.

*1738-9

Variations of leopard's head and lion passant.

† 
Although a punch for the leopard's head mark different in form from that of 1739–40 was used between 1751 and 1756, its use was not entirely general, because articles of the latter period are frequently found stamped with the leopard's head mark as here illustrated.

‡This and other date letters in this cycle are occasionally found with somewhat broader backgrounds.

Notes for p. 31:

*In 1798 the Stat. 38 Geo. III, c.69, authorized a new gold standard of 18 carats fine, and provided that it should be marked with a crown and 18 in place of the lion passant. Up to this time gold and silver of the old standard had been marked alike. Gold of the old standard (22 carats) continued to be marked with the same marks as silver of the old standard until 1844, when a crown and 22 were substituted for the lion passant, for the purpose of distinguishing it from silver-gilt.

1798

An example of the marks on 18 carat gold, as prescribed in the year 1798; on gold snuff box; Mr. Harry Alston.

†For 1804–5, 1808–9; and one or two other years, the duty mark has been found in a trefoil-shaped stamp. It has also been found in the oval stamp in the same years. From 1808 to 1815 the king's head is occasionally found like that shown for 1816–17.

CYCLE XVIII.

1854-5	,,		,,	,,	WR S
1855-6	,,		,,	,,	GA

The shield enclosing the date-letters of Cycle XVIII. and preceding cycles is occasionally found with its base straight, or slightly rounded.

1825-35

On plate of the second quarter of the 19th century, the leopard's head is frequently found without whiskers, as here illustrated from an example on a pierced salt cellar: Messrs. Alstons & Hallam.

The date-letter B of 1837-8 is accompanied by the head of Wm. IV. from 29 May to 20 June, 1837.

CYCLE XX.

FIVE STAMPS AS BELOW.

CYCLE XXI.

FIVE STAMPS TILL 1890, THENCEFORWARD FOUR ONLY.

*This is merely an example of the Britannia marks as frequently employed after 1720 to denote the higher standard. It is not typical of 1863–4, or of any particular year. *Vide* p. 20 *infra*.

In 1883 a law was passed decreeing that all silver plate brought into the United Kingdom from abroad should, before being offered for sale, be assayed, and if found of the proper standard, marked with an F in an oval. In 1904, that law changed and it was directed that such silver should have its fineness indicated by a decimal stamp (.925 or .9584) in a long oval and have the symbol of the local assay office (usually a zodiacal sign) also impressed.

,,		A fringed S, as 1541.
1545-6		A queen's head.
,,		N B in monogram (Nicholas Bartlemew).
,,		A head
1546-7		A fleur-de-lys.
1547-8		N B in monogram as 1545.
1548-9		A covered cup.
,,		
,,		M, or W inverted.
1549-50		F B.
,,		R D in monogram (Robert Danbe).
,,		C A in monogram.
,,		Crowned cross moline.
1550-1		A high boot.
,,		A hand under a coronet.

DATE.	GOLDSMITHS' MARKS.	
1551-2		Crescent enclosing mullet.
,,		A K conjoined.
,,		Stag's head caboshed.
,,		Swan's head erased.
1552-3		T L in monogram.
1553-4		Robert Danbe, as 1549.
,,		As 1551.
1554-5		As 1552.
,,		Queen's head as 1545.
1555-6		I F (John Freeman).
,,		T L., as 1554.
1556-7		Stag's head, as 1551.
,,		W.
1557-8		H crowned.
,,		W over a crescent.
1558-9		A rose (Henry Gillard).
,,		C A in monogram.
1559-60		H W.
,,		A lamp.
,,		A bird's claw, see 1565.
,,		A mullet.
,,		A fleur-de-lys.
,,		C C linked.
,,		S K.
1560 1		
,,		
,,		A bird.

DATE.	GOLDSMITHS' MARKS.	
1561-2		A spur.
,,		P. C.
,,		A star radiant.
,,		Crossed compasses within a radiant circle.
,,		A fleur-de-lys (Wm. Dyxson).
,,		R B.
,,		Three mullets over a crescent (R. Durrant)
1562-3		S R.
,,		Sun in splendour.
,,		R M.
,,		W C over a pig (Wm. Cater).
,,		A wallet hook palewise on a cross bendwise.
,,		N S in monogram (Nicholas Sutton).
,,		H K conjoined.
,,		R D in monogram, see 1549 (Robert Danbe).
,,		An eagle displayed (Fras. Jackson).
,,		Crescent enclosing mullet.
,,		Eagle's (?) head between I C.
,,		A fleur-de-lys incuse.
,,		A hand grasping a cross, see 1564.
,,		A holly leaf incuse.
1563-4		3 mullets over a crescent, as 1561.
,,		I P (John Pikenynge).
,,		H W, as 1559.
,,		A bird.
,,		W in radiant circle.

DATE.	GOLDSMITHS' MARKS.	
1563-4		A spur.
,,		R D (Robt. Danbe), as 1549.
1564-5		A mullet.
,,		
,,		A fleur-de-lys, as 1561.
,,		I C (John Cross or John Clark)
,,		A horse's head couped (Robert Medley ?)
,,		I S in monogram.
,,		A campanula, as 1566.
,,		A.
1565-6		A bird's claw, see 1559.
,,		I P (John Pikenynge), see 1563.
,,		As 1562.
,,		
,,		H W, as 1559.
,,		R K.
1566-7		Stars and crescent.
,,		A.
,,		A star radiant, as 1561.
,,		
,,		A campanula, as 1564.
,,		Acorns.
,,		
,,		W H, pellet below.

DATE.	GOLDSMITHS' MARKS.	
1567-8		A bull's head erased (Affabel Partridge ?)
,,		A wallet hook.
,,		A bird.
,,		F G in monogram.
,,		A horse's head couped, as 1564.
,,		R D (Robert Danbe), as 1549.
,,		A hand grasping a hammer, see 1535.
,,		E R in monogram (Edward Ranklyn).
,,		T B in monogram (Thos. Brown or Benson).
,,		A talbot ? sejant (Thos. Conell).
,,		A cock's comb ?
1568-9		I F, see 1555 (Jasper Fysher ?).
,,		M.
,,		A wallet hook.
,,		A bunch of grapes.
,,		F R in monogram.
,,		I H, see 1570.
,,		?
,,		A globe.
,,		Two birds.
,,		R A.
1569-70		A bunch of grapes, see 1568.
,,		F, enclosing T, in monogram.
,,		A hand grasping hammer, see 1567.
,,		Animal's head couped.

DATE.	GOLDSMITHS' MARKS.	
1569-70		A hooded falcon (Thomas Bampton).
,,		R V, a heart beneath.
,,		A bunch of grapes, see 1568.
1570-1		A millrind.
,,		An orb and cross.
,,		A beaked bassinet.
,,		A K conjoined, see 1551.
,,		T E o, in monogram (Thomas Heard).
,,		T H in monogram (Thos. Harrison or Hampton).
,,		A pair of bellows.
,,		H B conjoined (Hy. Boswell).
,,		M in plain shield.
,,		Covered cup (John Mabbe).
,,		I H (John Harryson)..
,,		A campanula, see 1564.
,,		R H conjoined.
1571-2		F ?
,,		A heart.
,,		Porcupine over T A.
,,		L reversed.
,,		A bird (John Bird ?)
,,		A hand grasping a cresslet, see 1562.
,,		I piercing G.
,,		A beaked bassinet, see 1570.
,,		T G in monogram.

DATE.	GOLDSMITHS' MARKS.	
1571-2		T L.
,,		Lombardic A.
,,		A B conjoined.
,,		N R conjoined.
1572-3		A trefoil.
,,		A trefoil slipped.
,,		H B conjoined, see 1570.
,,		H R.
,,		A cross couped.
,,		Grotesque object and bunch of grapes.
1573-4		B.
,,		I F.
,,		N O in monogram.
,,		I P in shaped shield.
,,		A beaked helmet, see 1571.
,,		A millrind, as 1570.
,,		A pelican displayed.
,,		H S in monogram (Henry Sutton).
,,		H R conjoined.
,,		A bird, see 1571.
,,		Escallop.
1574-5		Sun in splendour, see 1562.
,,		C P, an axe between.
,,		V S, fleur-de-lys below.
1575-6		Hand grasping hammer between H C, see 1535.

Note. The interpretation given by Sir Charles Jackson, in the column, of the mark $\frac{N}{A}$ is incorrect; the mark complete is N A A S, and though found on a piece in the Draper collection, is probably bogus. The author has found the mark upon two fraudulent pieces of silver. The fact that no marks for "N A" or "A S" as individual silversmiths working during this period have appeared is a suspicious circumstance, as members of a partnership usually engage in business "on their own" either before or after the partnership. H. P. O.

CHAPTER V

Marks on York Plate

From 1411 to 1560 all silver plate made in York should have been marked with the leopard's head and fleur-de-lys, both dimidiated (cut vertically in half) and joined in a single stamp. The use of date letters probably commenced in 1560 though no earlier example than the D given in Table I has been found. The assay office in York was abolished in 1858.

CHAPTER VII

Marks on Exeter Plate

The Exeter Assay Office was established in 1701 and discontinued in 1883. A guild of goldsmiths flourished in Exeter from a time long anterior to the reign of Elizabeth. No Exeter town mark has been found of earlier date than c. 1571; before that date only makers' marks appear to have been used.

TABLE I.

FROM 1544 TO 1592 OR THEREABOUT.

DATE.	MARKS.	MAKER'S NAME.	ARTICLES AND OWNERS.
c. 1544-98		Richard Hilliard.	Communion cups: St. Edmund's and St. Sidwell's, Exeter.

CHAPTER VIII

Marks on Newcastle Plate

Money was minted at Newcastle in 1248 and in the reign of Henry VI (1423) it was ordained that Newcastle-upon-Tyne should have a "touch" (assay office). A proper assay office for marking silver plate was established in 1702.

CHAPTER IX

Marks on Chester Plate

The Chester Assay Office was established in 1687, though a guild of silversmiths existed as early as 1573. The assay office was suspended in 1696 but re-established in 1701. It still functions.

The Birmingham Assay Office will not disclose the names of silversmiths registered after 1850.

The twenty-year cycle for Birmingham commencing with 1925–6 and continuing to 1945–6 is distinguished by date letters in Roman capitals, in a shield resembling that for London, 1875–6.

SUPPLEMENTARY LIST OF ADDITIONAL MARKS OF GOLDSMITHS.

Impressed at Birmingham, not illustrated in the preceding tables.

1690		Do. do. made by Arthur Mangey (see above): Mr. J. H. Walter.
,,	,,	Beaker: Mr. D. T. Davis.

THE CHANNEL ISLANDS, CALCUTTA AND JAMAICA.

The preceding pages contain all the known place marks used in Great Britain except those employed in the Channel Islands. In Guernsey, 1690–1730 a silversmith stamped his wares with GH surmounted by what resembles an eye, fringed above, a harp lying on its side, and the letter R (old English) in a shield. The other marks, they are very few, are initials only, and do not, in the absence of especial knowledge, enable one definitely to assign them. An exception is the mark of T.DG over the letters J. LG, which we know was a mark used on the Isle of Jersey *circa* 1830.

The British firms of Pillar & Co. and Hamilton & Co. made silver in Calcutta in the first two decades of the last century. The former's mark was a date letter A similar to that for London, 1796–7, a lion passant, and the letter P over & Co. Hamilton & Co. identified their products with an elephant in an oval shield, a covered ewer with handles, the letters "H & Co." in a square block, and the letter A in a pyramid. This description will enable the reader to dispense with illustrations.

One piece of silver is known to have come from Jamaica, W. I. It is marked with a leopard's head crowned, in a plain shield, concave at top, J. EWAN in a rectangle, and a lion passant in a shield straight at the top and rounded at the sides and base.

CHAPTER XV

Marks on Edinburgh Plate

THERE were no marks struck on Scotch silver before 1457. In that year a statute was enacted which required the maker and the deacon of the guild to affix their marks to each piece before it was offered for sale. The records, of Edinburgh at least, have been so well preserved that it is possible to place each piece of silver made subsequent to that year within a period limited by the working life of the silversmith or the incumbency of the deacon. In 1681, the Edinburgh Goldsmiths' Incorporation adopted a variable annual date letter, abolished the office of deacon and substituted an assay master whose mark fixed his responsibility for each piece struck. In 1759, the use of the thistle as an assay master's mark took the place of the initials which the assay master had used up to that time.

The "Britannia Standard" act of William and Mary was not applied to Scotland and the practice of making silver of the higher standard never prevailed in the northern province.

In 1836 a British statute designated the thistle as the sterling mark and the castle as the guild mark for Edinburgh.

The date in parentheses indicates the year of the workman's admission to the guild.

1820		... ...	Tea-spoon: Mr. Geo. Henderson.
		... ...	Table-spoon (fiddle pattern): Mr. Chisholm.
1836		David Greig (?)	Toddy ladle (fiddle pattern): Mr. Dudley Westropp.

CHAPTER XVI

Marks on Glasgow Plate

The Glasgow goldsmiths were incorporated with other metal workers under the name of "hammermen" in 1536.

A date letter was probably adopted in 1681, as it was in Edinburgh, but its use was discontinued about 1710 and was not regularly used again until 1819. The letter S which is frequently found on early pieces probably stands for sterling. The assay office was established by statute of George III in Glasgow in the year 1819.

ST. ANDREWS

About 1671

TAIN

LATE EIGHTEENTH CENTURY

MARKS.	ARTICLES AND OWNERS.
	Table-spoon : The Marquess of Breadalbane, K.G.
	Tea-pot : Mr. Willoughby Farr.
	Toddy ladle : The Marquess of Breadalbane, K.G.
	Dinner fork : Do. do.
	Tea-spoon : Do. do.

MONTROSE

DATE (ABOUT).	MARKS.	MAKER'S NAME.	ARTICLES AND OWNERS.
1670		Wm. Lindsay (probably).	Table-spoon, pricked 1672, Mr. A. W. Stone.
1671		Wm. Lindsay.	Com. cups, "gifted 1671": Forfar. Spoon with flat stem : Mr. W. Boore.
		Do. do.	Com. cup, "given 1688": Laurence-kirk, Montrose.
1680-3		Do. do.	Com. cups, "gifted 1680": Bervie, and (1683) Aberlemno.
1710		... ...	Wavy-end spoon : Mr. J. H. Walter.
1752		Thos. Johnston.	Com. cups : Marykirk, Montrose. Table-spoon : Mr. H. Dawson.
1788		Benj. Lumsden (admitted 1788).	Dessert-spoon : The Marquess of Breadalbane, K.G.
1811		Wm. Mill (1811)	Tea-spoon : Do. do.

CHAPTER XVIII

Unascribed Scotch Marks

THE DATES APPENDED—WHICH ARE CONJECTURED APPROXIMATELY—ARE SUCH AS THE CHARACTER OF THE ARTICLE AND STYLE OF THE WORK IN EACH CASE SUGGEST.

DATE (ABOUT).	MARKS.	ARTICLES AND OWNERS.
1500		Possibly an Inverness mark. Spoon with "wrythen" knop: Lord Breadalbane.
1690		Folding rat-tail spoon: Museum of Antiquities, Edinburgh.
1700		Fork, with seal at end: Do. do. do.
"		Small quaich: Lord Breadalbane.
1720		Plaid brooch: Do. do.
1730		Taper stand, etc.: Windsor Castle. (? Chas. Alchorne, ent. 1729.)
1750		Dessert-spoons: Lord Breadalbane.
"		Salt-box: Mr. Dudley Westropp.
"		Small bowl: Messrs. Crichton.
"		Large soup ladle: The Marquess of Breadalbane, K.G.
"		Small quaich: Mr. Nyberg.
"		*{Bonbonnière: The Marquess of Breadalbane, K.G. Table-spoons: Lord Newlands.
1760		Tea-spoons: The Marquess of Breadalbane, K.G.
"		Tea-spoon: Do. do.
"		Two-handled tray: Mr. A. J. Davis.
1770		Table-spoon: The Marquess of Breadalbane, K.G.
"		Dessert-spoon: Messrs. Mackay & Chisholm.

* Lord Breadalbane suggests that these marks emanate from some place near Glasgow.

DATE (ABOUT).	MARKS.	ARTICLES AND OWNERS.
1780		Sugar tongs: The Marquess of Breadalbane, K.G.
,,		Tea-spoon : Do. do.
1790		Sauce ladle : Do, do.
,,		(Perhaps Dundee marks). Each mark struck twice on table-spoons: Messrs. Crichton.
,,		Dessert-spoons: Messrs. Crichton.
,,		Fiddle-pattern forks: Noted by Mr. Dudley Westropp.
1800		*(Perhaps Dundee marks) Marrow scoop: Lord Breadalbane.
,,		†Shell-pattern caddy spoon: Lord Breadalbane.
,,		Small tea-spoon : Do. do.
,,		Salt-spoon : Do. do.
,,		Table-spoon and mounts of shell snuff-box: The Marquess of Breadalbane, K.G.
1816		‡ Pepper caster: Messrs. Crichton.
1800-20		*Perhaps John Glenn of Montrose. Half a dozen tea-spoons: Lord Breadalbane.
,,		*Dozen fiddle-pattern table-spoons: Lord Breadalbane.
,,		* Dozen fiddle-pattern tea-spoons : Do. do.

* These are believed to be the marks of travelling goldsmiths, called "Tinkers".
† It has been suggested that these are Leith marks.
‡ It is with considerable hesitation that this line of marks is included. The work, however, not appearing to be continental, as suggested by the striking of the full date "1816," the marks have been placed here as "doubtful" Scotch because of the thistle.

CHAPTER XIX

Marks on Dublin Plate

Highly skilled goldsmiths worked in Ireland when Saxon kings reigned in England. Names of goldsmiths of the Twelfth Century have been preserved. The Dublin Goldsmiths Company was chartered in 1637.

Index

TO THE MARKS OF ENGLISH, SCOTCH, AND IRISH SILVERSMITHS

Marks comprising two or more letters are indexed under the first letter of the pair or group. Marks composed of intertwined letters are indexed under each letter appearing in the monogram. Devices accompanied by initials are indexed under the first initial letter. Marks difficult to identify by a short description must be looked for among the marks themselves. Such marks are few and appear only among the very earliest. Later, initials or names were always used. Marks appearing in the form of a cross, e. g., C B L D are indexed under the first of the horizontal line letters (in this case under C).

GLOSSARY

Affrontée	Facing the spectator.
Annulet	A ring borne as a charge (*see* Charge).
Bendwise	Lying in the direction of the bend or bends (of a shield or escutcheon).
Charge	Any figure borne on an escutcheon.
Couped	Cut evenly across. Opposed to Erased.
Dimidiated	Cut in half.
Erased	Represented as having been torn across leaving ragged projections.
Incuse	Cut in. Opposed to "in relief."
Moline	A description of ends of a figure divided and turned backward.
Mullet	A five- or six-pointed star.
Palewise	Divided into four or more equal parts by vertical lines.
Pattée	Spreading toward the extremity, e. g., the arms of a Maltese cross.
Saltire	A cross, both members of which lie diagonally, as a St. Andrew's cross. Any bearing set obliquely to the sides of an escutcheon.
Slipped	A twig or branch represented as torn from the stalk so as to leave a strip of the bark still clinging to it.

CHAPTER XXII

Early American Silver

THE earliest "American" silversmith was the Englishman, John Hull, who became the first mint master in Boston, in 1652. Hull, his contemporaries and successors, Dixwell, Dummer, Coney, Winslow, David Jesse, and many others, were all prominent in the civic life of the colonies. It is fortunate for us that during most of the Colonial period very high artistic standards prevailed in England, for the fashions of the new country were faithfully modelled upon those prevailing in the old.

A higher standard of intelligence seemed to prevail among the Colonial silversmiths, and it is generally conceded that the average quality of their production was higher than that in England.

In spite of the apparent temptation to fabricate early American silver with forged names or marks, instances of that practice must be extremely rare. Offences of that sort are very apt to reach the courts and the newspapers, and the writer, though for many years interested in the subject, has never heard of a case or seen one instance of deliberate forgery.

Conditions of life were singularly stable in the American colonies, continuing so even during the throes of the Revolutionary War. Specimens of the handiwork of New England silversmiths would only be exposed to destruction when they drifted into the possession of Southern families whose personal belongings were, in many instances, destroyed during the Civil War. Consequently, a large part of the products of New England and New York silversmiths has been handed down to us.

New York had a group of silversmiths whose work in the first half of the Eighteenth Century was clearly distinguishable from that of their New England contemporaries because of its Dutch and French characteristics.

At the close of the Eighteenth Century, such distinctions seem to have disappeared, and we can only distinguish the place of origin of American silver at that period by its marks. One exception to this statement may be made. In 1810–1820, the silversmiths of Philadelphia had an objectionable habit of soldering moulded or stamped silver strips with a stereotyped decoration around the necks and bases of pieces belonging to tea and coffee sets.

After spinning and stamping silver came into general use, about 1840, the factory supplanted the silversmith. One or two silversmiths have continued to turn out handwrought silver up to the present time, but their work is not "Early Americana."

In the very early Colonial days our silversmiths closely followed the fashion of marking employed by their English fellow craftsmen; they used their initials with some symbol. A little later, the use of a symbol became less frequent and it became more common for the workman to impress his entire name, with or without his initials. In the last quarter of the Eighteenth Century that practice had become almost universal, as had also the use of Roman letters, frequently all capitals. Unless otherwise specified, the reader will know that that type was employed.

In nearly every case, the American silversmiths used Roman capitals to designate their ware. In some cases, both capitals and small letters were employed: "John Brown," for example. The marks given in the following tables will show the form used, without any qualifications being necessary except the word "script," where that type had been employed by the silversmiths.

The author has been enabled to give some twenty-five or thirty or more marks than have hitherto been published in books on this subject.

The following list has been compiled from different sources. Some of the names and the respective locations of those bearing them have been gleaned from directories and the columns of old newspapers. The term "silversmith" is often inaccurately applied in both mediums and at this time it is not always possible to distinguish between the retailer and actual worker in silver. Many silversmiths, beginning with the Nineteenth Century, stamped the names of the retailer upon their wares. The custom still prevails. Hence even where the name appearing here has been taken from a piece of silver, it may have designated a dealer. Of course this caution does not apply to pieces marked with initials only or a symbol (device).

I have thought it wise to make the list as comprehensive as possible, and though that course excludes the possibility of strict discrimination, it does enable one at least to fix the period and place of production and does not present any difficulty in regard to those silversmiths whose work is the most highly prized.

Abbreviations: D means that the name appeared in the local directory of the year given: *c.* stands for *circa;* F for Freeman; when two dates are shown (1735–1815), they represent the birth and death year of the silversmith; hyphen followed by date (e.g. –1815) signifies the date of the demise; one date followed by hyphen (e.g., 1735–), the date of birth. A date alone, if unqualified, means that the subject was working at that period.

Follows a key to the descriptive words used in connection with the marks:

‡I desire to express my obligation to Mr. Stephen G. C. Ensko for his courteous permission to reproduce the facsimiles of American makers' marks on this and the following pages; they have been taken from *American Silversmiths and Their Marks*. Mr. Ensko's book contains a very great number of such facsimiles and is on sale in his shop at 682 Lexington Avenue, New York City.

‡Pursuant to an act of the Maryland Legislature, the local government of Baltimore, in 1814, passed a law which interdicted the use of a lower standard of silver than 11 oz. troy to the pound of metal, and appointed an assayer who signified his approval of pieces submitted to him by affixing a dominical letter, arbitrarily chosen, and a head of the goddess of liberty. The office was abolished in 1830 and a law was substituted requiring the gold or silversmith to stamp the quality of his wares. The use of the head was discontinued in 1823. The letters and the years represented by each are: A, 1815; G (and F), 1816; E, 1817, D, 1818, C, 1819, B (and A) 1820; G, 1821; F, 1822; E, 1823; C (and D), 1824; B, 1825; A, 1826; G, 1827; F (and E), 1828; D, 1829.

‡To distinguish the marks of the two Paul Reveres is often a matter of difficulty unless one has some extraneous evidence of the origin of the silver of which provenance is sought.

The following statemets should help:

Revere, Senior, alone used the marks: P'REVERE in a rectangle and (2d) P. Revere, italic script, in a rectangle, and (3d) P R in a crowned shield.

Paul Revere, Jr., used the mark REVERE in a rectangle; his fathern ever did; he also used P. R script in a rectangle, sometimes in conjunction with REVERE.

The following marks are also attributed to Paul Revere, the son: P R in a rectangle; P R incised; and REVERE in a rectangle. The points of the V are joined to the two Es.

One should know that tea or coffee *sets* were not made in the lifetime of the elder Revere. This often will prove a decisive factor, as the younger Revere made a number of tea sets.

Writing upon this subject to the author, Judge A. T. Clearwater says: "Paul Revere, the patriot, ordinarily used the mark REVERE, although there are authenticated pieces upon which he used the marks of P. R. but they are rare. There are, as well, pieces made by the elder Revere which were finished, particularly as to the engraving, by the son. They also are "unusual." Upon such pieces it might be possible that both silversmiths would place their marks.

Mr. Charles O. Cornelius, replying to an inquiry upon this subject, was kind enough to give me an opinion which agrees with that of Judge Clearwater.

Another help lies in the fact that the initial mark of the father appears in a crowned shield, while that of the son is in a rectangle or simply incised. Writing to the author upon this subject, Mr. Henry Davis Sleeper says:

"My intensive experience for many years collecting Paul Revere silver leads me to believe that the very large majority of the silver done by him or in his shop during his life, was marked REVERE with a pellet before it, in a rectangle, and the father's marked exactly as you have it, P. REVERE or P. R. . . . All of the twenty-three pieces of silver, many of them large ones, which I gave to the Boston Museum have a pedigree as I acquired pieces only of which I could get complete proof as to ownership from the first to the final owner . . . were all under Revere, the son's time, and were all marked REVERE with a pellet in a rectangle. I have also several pieces of Revere, Senior, all of which are marked P. R. or P. REVERE."

CHAPTER XXIV

Old French Silver

BEFORE the Roman invasion workers in the precious metals were scattered throughout Gaul. Their work was coarse and heavy. Pliny tells us that horse trappings, and even ox yokes, were decorated with silver by the inhabitants of Alise in Burgundy.

Cæsar had many Italian silversmiths in his invading army and their influence was immediate and widespread. In a short while the Gallic artisans outstripped their teachers and, in the time of Constantine, Byzantium drew her gold and silver ornaments, including the enamels of Limoges, from France.

St. Eloi (588–659) was a brilliant silversmith before he entered the priesthood. He was made a bishop when he was appointed master of the mint (*maître de monnaie royale*) in the reign of Dagobert, an office he continued to fill under Clovis II. St. Eloi gave a great impetus to the art in France, where he now gives his name to the guild of gold and silversmiths, whose patron saint he is. He organized the first body of workers in gold and silver composed of masters, companions, and apprentices, and secured for it State recognition as a law-making body.

That St. Eloi was a layman silversmith before he was a priest is itself remarkable. At that period the art of silversmithing was practised only by the priesthood and St. Eloi restricted his associates to men in holy orders. Not until the commencement of the Twelfth Century was the craft wholly secularized in France.

The origin of impressing the maker's mark by means of a punch

upon a piece of silver is unknown, but up to the close of the Thirteenth Century that mark was the only guarantee for which the purchaser could look.

In 1275 a law was enacted requiring the smith to stamp his work with the mark of the town in which he worked.

The first "punch of guarantee" followed the congress of Pontoise, convened in 1313 by Philip le Bel. It was a *fleur-de-lis* in a lozenge.

In 1416 the date letter was introduced. A letter of the alphabet, crowned. It changed each year. 1461: A; 1462: B taking all the letters except J, U, and W.

Up to 1621 the letters employed were small Gothic capitals. After that date large Roman capitals were used. The duties payable to the state were constantly increased; their collection, however, was unsatisfactory until Louis XII created the office of "Farmer of the Revenue" (or "Farmer-general"). These farmers had to impose their punch upon all pieces of proper alloy upon which the duty had been paid.

This system was perfected by Louis XIV.

There were then four marks or punches for each piece of silver:

1. The mark of the silversmith.
2. The mark of the Guild, warranting the standard.
3. The mark of the Farmer-general.
4. The mark of discharge of the Farmer-general.

The procedure was as follows:

The silversmith placed his mark upon a sheet of silver and sent it to the "Maison Commune," where the mark of the Guild was impressed after the standard had been verified. This punch, called the "countermark," was impressed as close as possible to that of the maker, who had chosen a location for his mark that would bring it when completed as near as possible to the centre

of the bottom of the piece and on the under side. It was then taken to the Farmer-general, and he, or his representative, placed the "charge" mark as near as possible to the other two. The piece was then carried away and finished, the workman taking care not to obliterate the marks. If the bottom of the piece was "belled" out the marks would be deformed but not effaced.

After the work was completed it was again taken to the Farmer-general who placed upon it his little "punch of discharge," after having collected the tax computed upon its weight. This mark, unlike the others, was placed upon the edge or rim of the piece. The piece was now ready for the market.

Until 1784 the date letter was the same for all of France. That system was then superseded by one that gave to each town a distinctive letter and provided for the use of date latters by all of them but Paris. That was allotted a crowned P with the date between the crown and the P. 1785 would be represented by the figures 85. They are so minute that they escape notice unless one exercises care or possesses extraordinary acuity of vision.

The marks of charge and discharge were employed until the law of April, 1791, abolished all the taxes on silver. The law November, 1797, re-imposed the duty but it was levied with the imposition of the first stamp, which denotes both the standard and the payment of the duty.

There are two other marks besides those mentioned above that find a place in the law of November 19, 1797:

1. The punch *de hasard.*

2. The punch variously called *recense*, verification, and recognition.

The punch *de hasard* was applied to ancient pieces that for some reason (age would be one) had not been marked.

The *recense* mark was a confirmatory mark which testified to the genuineness of the stamps already upon the piece and the

purported standard. It is not clear as to whether the *recense* could or could not be demanded by a private individual uncertain as to the genuineness of a recent purchase or to settle a dispute. The ordinance of Louis Philippe (April, 1838), which required the *recense*, was a precautionary device against counterfeiting and was employed under some secret system. There were a hundred and thirty-eight of these devices used. They were struck on a *bigorne* anvil in the manner I have described elsewhere. With the head of Minerva we frequently find as an assay mark the head of a woman, in full face with neck exposed; she looks to the right and there is a letter P at the left side of the neck. The P is the Paris mark. Boivin says that there is a variation of this mark with a figure 1 (denoting the higher standard) replacing the P. He is clearly in error. Apart from the fact that I have never seen such a mark, we know that the assay mark never, of itself, indicated the standard. It only guaranteed that the silver was of the quality represented by the standard mark. In other words, the woman's head just described would be the same on a piece bearing the Minerva head with the figure 1 as it would be on a piece bearing the lower standard mark, a head of Minerva with the numeral 2.

The Decree of 9 November, 1797, also provided for the verification of pieces of silver of foreign or of undetermined origin; in the latter case the pieces were termed *de hasard*, and the mark is so designated.

Distinction		Paris.	Departments.
Foreign.	Large.

Verification.	Large.		
	Medium.		
	Small.		
Foreign.	Large.		
	Small.		

At this epoch there were two small assay marks for gold: the first for articles with garniture; the other without.

Note.—The use of these punches ceased on the 16th of August 1819. The same day they were replaced by those of the Standard and Assay drawn in the following tables. The punches of the Ingots and the Argue were not renewed.

Note.—The above table is according to Markham & Chaffers.

DECREE OF 9TH NOVEMBER, 1797.

Higher standard mark for silver (.950). The numeral is also found on the left side of the cock.

Lower standard mark for silver (.800).

The assay office mark for large pieces of silver; sometimes the figures are inverted.

Assay office mark for small pieces of silver.

Confirmation (recense) mark of the assay office on pieces of silver made during the period current with the time of stamping. Modern pieces.

Confirmation mark for old pieces of silver.

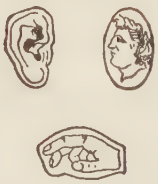
DECREE OF 1ST SEPTEMBER, 1809

Higher standard mark for silver.

Lower standard mark for silver (.800).

Assay office marks for large pieces of silver.

Assay office mark for small pieces of silver.



Recense marks of the assay office.

This head often appears on silver marked with the head of Minerva. See table of marks under the Decree of 1835.

Note.—The above marks are according to Boivin.

It seems that the recense mark was originally designed to settle the question of authenticity. It was affirmative. In England the procedure was different. There was no confirmation, but, if the marks were forged, or fraudulent (i.e. substituted) they would be erased. At a later period the Paris Assay Office used the recense mark to check frauds upon the revenue and compelled all silversmiths to re-submit their marked wares so that this mark might be applied to those found genuine.

TABLE OF PUNCHES,

Made in execution of the Royal Ordinance of 22nd October 1817.

Distinction.		Paris.	Departments.
Gold Standards.	1st. 0.920		
	2nd. 0.840		
	3rd. 0.750		
Silver Standards.	1st. 0.950		
	2nd. 0.800		
Gold Assay.	Large.		
	Small.		See the Divisional Punches.

Distinction.		Paris.	Departments.
Silver Assay.	Large.		
	Medium.		None for the Departments.
	Small.		See the Table of Divisional Punches.
Verification.	Large.		
	Small.		See the Table of Divisional Punches.
Foreign.	Large.		
	Small.		

Remarks.—1. In the figure of the large punch of Assay of gold and silver, and of Verification, is engraved the number of the Department as shown in the list of Assay Offices. 2. The numeral indicative of each standard is engraved in the figure of the punches which serve to standard the works of gold and silver.

Note.—The above table is according to Markham & Chaffers.

TABLE OF STAMPS

Of Standard and Assay, and of Verification of *Gold* and *Silver* Works, for Paris and the Departments, as directed by the Act of 30th June 1835.

E T Stamp for Foreign Wares.

Head of a Bulldog. *Gold and Silver.* Stamp of Verification.

Paris and Departments. D on the collar.

Note.—The above table is according to Markham and Chaffers. The dotted lines indicate the Paris punches.

CHAPTER XXVI

Marks on French Provincial Plate

AIX

Punch of Charge	*Punch of Discharge*	*Period*
		1774–1780 (Large articles)
		1774–1780 (Small articles)
		1780–1789 (Large articles)
		1780–1789 (Small articles)

The above were state stamps; the stamps of the guild which guaranteed the standard (.958) during the above periods was a single extended wing, the top pointing to right.

AMIENS AND SOISSONS

Punch of Charge	*Punch of Discharge*	*Period*
		1774–1780 (Large articles)
		1774–1780 (Small articles)
		1780–1789 (Large articles)
		1780–1789 (Small articles)

The guild mark (punch of guaranty) for Amiens 1784–1789 was a crossbow ready for discharge. After May 1, 1838, a six-pointed star was used for Amiens silver.

ALENÇON AND CAEN

Punch of Charge	*Punch of Discharge*	*Period*
		1774–1780 (Large articles)
		1774–1780 (Small articles)
		1780–1789 (Large articles)
		1780–1789 (Small articles)

The guild mark during the above periods was a potato bug viewed from above.

ARRAS

	1639
	1684
	17th–18th Century

The numerals 12, 13, 14, appearing with German marks on silver indicate the number of sixteenths of pure silver contained in the article, 12 being equivalent to .750 fine; 13, .8125, etc.

In modern times the standard of the German Empire has been .800. Goods destined for abroad are made of higher standards and are appropriately marked: .925 "Sterling," .950, etc.

					19th Century
				DRESDEN	

Late in the 19th Century the crossed swords instead of being in relief were encised (the field being in relief). The word DRESDEN also appears in some instances.

Date letters were also used as follows:

A 1702
G 1708
N 1714
Q 1717
T 1720
W 1722
X 1747
A 1726

BELGIUM

Following are the State Assay Office punches, denoting quality for modern silver and gold in Belgium under the law of 1868.

.900 fine for large pieces of silver

.800 fine for large pieces of silver

.900 fine for small pieces of silver

.800 fine for small pieces of silver

For large pieces of gold .800 fine (19. 2K)

For large pieces of gold .750 fine (18K)

For small pieces of gold .800 fine

For small pieces of gold .750 fine

Foreign silver

18th Century

The helmet, crowned, was used as guild mark in the early 16th Century. In the latter half of that period it was uncrowned. These marks were all in profile and looked to the left. In the first half of the 18th Century the helmet (or casque) was uncrowned and full face and continued so throughout the century.

RUSSIA

The marks on the following pages might lead the reader to believe that 84 in an oblong cartouche was a mark peculiar to the city of Tula. The distinctive town mark is often placed with 84 which designates the Russian standard of silver .903 fine, the unit being divided into ninety parts.

For approximately two centuries Russian silver has been dated, the year being represented by numerals in a straight line, e.g., 1746.

CHAPTER XXIX

Old Sheffield Plate

IN 1743, Thomas Boulsover, of Sheffield, discovered a process of plating silver on copper. This was ninety years before electroplating was invented.

It is important that Boulsover's method—and his method was followed for nearly a century—of making silver plate should be understood in order to be able to distinguish real "Old Sheffield Plate" from the imitation.

An ingot of silver and an ingot of copper were filed and scraped until two smooth surfaces were obtained. The size of the ingots would depend upon the size of the plate required, which would constitute the raw material for the subsequent processes. The two prepared surfaces, after having been made chemically clean by washing them in a weak solution of nitric acid, were firmly pressed together so that they fitted quite evenly. In order thoroughly to unite the two faces, they were put under a powerful hydraulic press. An additional copper plate was then placed on the silver side of the ingot, but before doing so, either the silver or copper face was painted with a preparation of chalk to keep the third piece of metal from fusing to the silver piece—the protection of the latter from the fire being the object of the introduction of the cover piece of copper, which, of course, would be used over and over again.

If it was intended to produce a piece of plated metal with silver upon both sides, the ingot of copper would be placed be-

tween two pieces of silver, in which case the middle piece would have to be cleaned upon both faces, while the two pieces of silver would only have to be prepared on their opposing faces. In that case, two protecting pieces of copper would have to be employed, each separated from the silver plates it was designed to protect by a coating of chalk. This precaution was necessary in order to prevent all five plates, or in the case of "single plate," all three plates, from fusing together. Where two plates of silver and one plate of copper in between were employed, the resulting product would be "double plate." Where a single ingot of copper and a single ingot of silver were fused together, the product was "single plate." The metal plates were then bound together with iron wire, and the edges where the silver and copper came in contact were treated with a fluxing solution, usually borax. The composite ingot was now ready for the fusing process and was placed in a coke furnace and subjected to great heat until the sheet of silver showed its molten condition by commencing to trickle down the sides of the ingot. It was then removed from the furnace, cooled and cleansed. It was then placed between rollers and rolled out into a sheet of the thickness of the walls of the vessel for the manufacture of which it was to be used. If the finished article was intended to be a coffee pot, a portion of which would have to be thinned by being subjected to a belling-out process, that circumstance would have to be considered in determining the thickness of the silver and copper plate.

This plated sheet of metal would now be used in precisely the same way that a sheet of solid silver, or solid copper, would be employed in the production of the finished article. It is important to note that, when it became necessary to shear off the edges of the metal, a uniform appearance of surface would not be exposed along the cut edge. In the case of double plate, a red line of copper would show between two white lines of silver. It would be

AN OLD SHEFFIELD TRAY SHOWING THE SILVER INSET PLATE

necessary to mask this cut edge, and this necessity affords us the first and most important test for distinguishing genuine "Old Sheffield Plate" from a piece of electroplate. At the present time, this situation could be met by either placing the entire article in a silver-plating solution and by electrical action put in a slight covering of silver over the entire piece, including the exposed edge, or by the process of "sponging" silver on the exposed edge by the use of a silver anode covered with a cloth saturated with a silver solution and the use of the electric current. In the days of Old Sheffield, however, electroplating being unknown, the maker of rolled plate had to employ another method. He met the situation in the very old days by making his silver ingot a trifle larger than the copper one. This would give him a projecting silver flap, which could be folded over the copper edge. This method, however, would only be practicable where the size of the ingot corresponded with the size of the finished article, for instance, a flat dish, and was soon abandoned. Where the plate had to be cut in irregular forms, the exposed edges were covered by a piece of silver wire, which was soldered in place. In many cases, this silver edge, called the "edge of poverty," is plainly perceptible to the eye and can be felt with the fingers.

Unfortunately, this "edge of poverty," which we now look for as desirable evidence of the genuine character of the article under examination, was, before the days of silver plating, regarded as an objectionable feature. Remember that "Old Sheffield Plate" was supposed to take the place of solid silver, and any feature that served to distinguish the substitute from the original was deemed objectionable. The result was that, in the first quarter of the Nineteenth Century, a process was invented which rendered the "edge of poverty" almost invisible, so that the test suggested by the foregoing is rather difficult of application to pieces of genuine plate when produced at that late period. The use of a reading

glass or microscope will, however, enable one to discover the point of union between the edge covering and the body of the article.

When it is attempted to take a sheet made of two separate pieces of metal and work it into a very ornate and convoluted surface, or a surface with sharp edges, it will be found that the outer covering, which in this case would be the silver, would be apt to crack and pull away from the metal below because the superficies of the outer pieces of metal, where covering the curve, or the angle, would be greater than the piece below. The makers of Sheffield Plate, therefore, found it more economical to take thin sheets of silver and either hammer or stamp them into the shapes desired. In the case of ornamentation, these pieces could be soldered immediately upon the sides of the vessel to be decorated. When decorated handles had to be applied, a piece of Sheffield Plate could be used for the lower, plain surface section of the handle, while the ornamented upper portion would be made of silver. When put together, the hollow between the silver and Sheffield Plate would be filled with a composition resembling solder. In the case of an electroplated article, the ornamental handles would be cast of a solid piece of brass and then electroplated after having been attached to the body.

This provides us with a second method of distinguishing "Old Sheffield Plate" from a modern plated article. The ornamentation upon the electroplated article, when scratched with a file, will show a hard base metal underneath. In the case of Old Sheffield, the ornamentation, being of silver, will be cut through with much more difficulty and a *soft* metal backing will be disclosed instead of hard brass or copper. The handle of genuine Sheffield will disclose a line of union running along the middle from one terminal of the handle to the other, and the upper or ornamented portion will respond to the same tests as the decoration on the body of the article. This line of union, of course, will be absent

in the case of a piece of electroplate, and a test with the file will show the same inner body on the top and bottom of the handle. Everything I have said about the handle will apply to other projecting parts of the article, for example, the feet and the finial (knob) of a coffee-pot lid.

Boulsover's invention was first applied to such articles as harness buckles, and it was not until about the commencement of the reign of George III (1760) that domestic articles were manufactured in any quantity.

It was just at this period that the beauty of English solid silver had reached its zenith, and for a number of years Old Sheffield tea and coffee sets, candelabra, candlesticks, and trays, showed the same beautiful simplicity and grace of outline. The Adam Brothers influenced the designs in Sheffield as they did in silver, and when the "Empire" fashions came into vogue (1800), both solid silver and Sheffield Plate followed the ornate fashions set in furniture. The worst examples of this period were produced in the reign of George IV (1820–1830). As soon as Sheffield plating showed that it could be adapted to the production of articles for the table and for decoration, Sheffield Plate became fashionable and popular. Enormous quantities were produced in the last forty years of the Eighteenth Century. This means that a great number of people were engaged in the industry. The manufacture soon spread beyond Sheffield; in fact, the largest single factory, the Soho Works, was located in Birmingham, under the management of Matthew Boulton, whose work is now valued as of the highest quality.

As might be expected, there were a number of black sheep among the makers of Old Sheffield Plate. The obvious way for them to gouge the public was to reduce the thickness of the silver ingot. This was done to such an extent that some of the rolled plate was no thicker in silver than is now obtained by electrical

deposition. This accounts for the number of articles on the market in an almost naked condition, which undoubtedly were at one time Sheffield Plate. The idea that these pieces, now denuded of their silver, have any value is a mistaken one. If the basic work and the design were good, they might be silver plated and be made of some value as electroplated silver.

Even the best pieces of Old Sheffield may show copper where they have been subjected to extraordinary wear, or the piece has been battered, in which case the silver will peel off as it would have done had the manufacturer attempted to turn the plain surface into a highly ornate one. The exposure of the copper is called "bleeding," and if very slight, is not detrimental to the article. If it is so great as to militate against the appearance of the piece, it should be taken to an expert and silver sponged on the bare places. The reason I say it should be taken to an expert is that the ordinary silver-plating plants employ a solution of *pure* silver and use a *pure* silver anode. Old Sheffield, to be sponged properly, should be treated with a solution made of *sterling* silver (i.e., a solution containing about 8 per cent. of copper to 92 per cent. of silver) and a sterling silver anode.

The reason for employing this method is that pure silver would make a glaring white patch on the gray surface of the Sheffield. The ingot of silver employed in the making of the sheet metal contained only about 92 per cent. of silver, and this, with the repeated annealing to which it is subjected while being hammered into shape, accounts for the soft gray colour of the finished product. This colour is approximated when a sterling silver bath and anode are used. The Sheffield process, or rolled-plate process, as it was then called, speedily became known in France, and in a very short time the industry was established there, entirely superseding the method known as "French plating," which had been in use since 1700.

OLD SHEFFIELD ROLLED PLATE OF THE LATER (FLORID) PERIOD

In England, many of the rolled-plate makers had been cutlers; in France, the manufacture of rolled plate was taken up, not by the ordinary manufacturer, but by silversmiths, and their products were taken cognizance of by the authorities of the Goldsmiths' Guild (St. Eloi), who threw about the product the same protection that they did about solid silver. The rules of the guild provided that each piece must be stamped with the mark denoting its quality; for instance, if the basic sheet were composed of nine kilos of copper and one kilo of silver, it would be marked *dixième*, but this term was abbreviated and represented by 10e, 10me, or 10m. Lower grades, or inferior grades, were marked 20me, 30me, and 40 me. It is very doubtful if any manufacturer took advantage of the provisions that enabled him to make the two lower grades of rolled plate. Personally, the author has never seen anything but *dixième* and *vingtième*. The consequence of this genesis of French rolled plate was that the product was much more uniformly beautiful in design than that produced in England by manufacturers without the æsthetic training of the French silversmiths, and was of more uniform good quality. It is very rare, indeed, to see a piece even of *vingtième* showing the copper, unless it be a piece that has been badly dented. Unfortunately, French Sheffield is very rare. The pieces that have most often come under my observation were made by the firm of Balain, whose mark is a grasshopper or locust impaled upon a pin.

There are widespread misapprehensions concerning Old Sheffield. These are due in a large measure to perusal of a number of books that have been written by amateurs without any proper or adequate basis of knowledge. They are also held by people who think that knowledge upon a subject of this sort may be a matter of intuition, and it is indeed difficult to eradicate views that, no matter how erroneous, are regarded as a birthright.

A flagrant error in belief is that Old Sheffield Plate is "hall-

marked." Of course, a "hallmark" can only be affixed to solid silver. A more excusable error is that all Sheffield markers put their mark upon their products. As a matter of fact, a very large proportion of the very finest pieces of Old Sheffield Plate are absolutely devoid of marks. On the other hand, "fakes" are abundantly marked, frequently with copies of two or more old marks. One woman collector told the author that in her collection of Old Sheffield she had a number of pieces manufactured by E. P. N. S. This is as if one had said her favourite author was "Mr. Anonymous." E. P. N. S. means electroplate on nickel silver. It was and is employed by a great number of manufacturers in order to give the public an honest and an accurate description of their wares.

Another misconception concerns the presence or absence of the silver inset plate or shield so often found on the sides of wine coolers, dish covers, in the centre of trays, and on the margins of platters. The popular belief is that these *pure* silver shields (the fact that these are pure silver makes them conspicuous against the darker background of Sheffield Plate) denote an extra fine quality of Old Sheffield; in fact, some collectors refuse to purchase pieces that are not so distinguished. A brief consideration of the reason for this innovation (the first inset shield was about 1810) will lead one to a different conclusion. The earlier Sheffield Plate was purposely made with a silver skin so thick that a careful engraver could put on a crest, coat of arms, monogram, or inscription without cutting through to the copper. It occurred to some genius that the old process was an extravagant one, as the piece would be engraved only in one or two places, and in order to provide for that, the silver plate was devised. The only reason for its employment is that the article, except where the plate appears, is too thinly covered with silver to stand engraving. Fortunately, the situation is saved in some measure by the fact

that manufacturers of very fine Sheffield found that some of their customers considered the inset plate decorative and followed the fashion without any noticeable depreciation in the quality of their output. As a rule, however, the silver inset plate must be regarded as evidence of inferior quality of plating but not of workmanship. People without the knowledge requisite to identify Old Sheffield Plate find the inset plate a convenient signpost. Those who restrict their collections to articles thus made will voluntarily shut themselves out of the best market.

Very early in the history of the manufacture of rolled plate, a number of manufacturers applied the process, with suitable changes, to the coating of articles of steel, such as knives and forks. In some cases, large spoons and skewers made of pot metal or britannia ware were "close-plated."

Britannia metal was an alloy, used, notably, by the great Sheffield firm of Thomas Dixon & Sons. Dixon & Sons came late on the scene. They were established in 1810 and thirty years later were among the first to adopt the new process of electroplating. They used as a base an alloy which they stamped "Britannia." Unfortunately, this was not a stable or static compound. For some reason, probably galvanic action set up by the proximity of different metallic elements, or perhaps merely oxidation, this metal has with the effluxion of time become porous and rotten. When the mutable character of the alloy became apparent, it was abandoned, and bell-metal, called "nickel silver," was employed —an alloy of nickel, copper, and tin and a very small proportion of zinc or antimony; the formula is variable but always adapted to produce a hard yellow metal. This makes such an admirable base that in England it has almost entirely superseded copper, and it is this metal, when plated, that is properly stamped E. P. N. S.

Old Sheffield is nearly always upon copper. Brass, however, has sometimes been employed. Many of the pieces of so-called

"Sheffield" on the market consist of a cast base electroplated. The old Sheffield pieces, of course, were hammered out by hand, except as to the mounts and handles, which were stamped and backed as I have described. Where a casting is employed, the use of a microscope will disclose a rather porous-looking surface—a feature, of course, that is entirely absent from a piece of metal that has been subjected to much hammering in the course of manufacture.

The reader who wishes to learn every detail of the manufacture of Old English Sheffield should peruse Mr. Frederick Bradbury's masterly work, *History of Old Sheffield Plate*. It is the only authoritative book upon that subject. Mr. Bradbury's ancestors were prominent makers of rolled plate in the Eighteenth Century, and the firm has had a continued existence from then until the present day, when it still occupies the foremost position among Sheffield silversmiths.

I have said that many of the handsomest and most valuable pieces of Old Sheffield are unmarked. That is not the result of chance alone. Prior to 1773, some eighteen makers of rolled plate in Sheffield and Birmingham—by no means all of the manufacturers in those cities—used marks. In that year, the law establishing an assay office in Sheffield struck at certain manufacturers of plated ware whose marks resembled hall marks, by prohibiting the striking of a letter or letters on articles made of metal, plated or covered with silver. Ten years later, in 1784, a law was passed which enabled the platers who were engaged in trade in Sheffield, or within a hundred miles thereof, to impress their goods with their names "together with any mark, figure, or device at the end of the name, such figure not being an assay office device for sterling silver or in imitation thereof." Such mark or marks must be approved and registered by the assay authorities.

During the intervening decade, no marks had been affixed to

Courtesy of the Okie Galleries

EXAMPLES OF FRENCH SHEFFIELD OF THE EMPIRE PERIOD

Dish warmers with lamps and stands

Old Sheffield Plate, and that happens to have been the most prolific decade in the history of the industry. It was also the best period from an artistic standpoint.

It should be noted that, under the law of 1784, it was not obligatory for the maker to mark his wares, and he must not do so without registration. There was a penalty of £100 for any violation of the statute.

Sixteen makers registered their marks in 1784, and many did not; so that we cannot say with certainty that any unmarked piece was made before 1784. However, that fact, coupled with the design of the piece—fashions were closely followed by silversmiths and Sheffield Plate makers—does enable one very often to fix the period of manufacture with reasonable certainty.

In 1785, seven Sheffield makers registered. One or two each year added their marks and names to the official list until 1807, when, for some reason, eighteen Birmingham manufacturers of rolled plate recorded their marks at the Sheffield assay office. Between 1808 and 1836 (both years inclusive), fifty-five Birmingham and nineteen Sheffield firms or individuals recorded their marks. No marks have been entered since.

It should be carefully noted that some of the marks put on old Sheffield have been used upon electroplate after the rolled-plate maker had changed his product as the result of the invention of electroplating. The crossed arrows (T. & J. Creswick) is an example. It is now used by Hutton & Company, successors to the old firm, on electroplate.

Frequently, on a piece of Old Sheffield, one will find marks other than a maker's mark. It may be of one or more letters, figures, or a symbol, such as a sun or two concentric circles. These are workmen's marks. Sometimes workmen would leave one factory and go to another, so that we find the identical workmen's mark upon pieces of different makers.

CHAPTER XXX

Sheffield Platers and Their Marks

APPROXIMATE DATES OF THE MANUFACTURERS' EARLIEST CONNECTION WITH THE FUSED PLATE INDUSTRY PREVIOUS TO 1773

Name of Firm.	Maker's Marks.	Date.	Location.	Trade Description.
Boulsover Thomas...	No Mark Traced.	1743	Sheffield, Norfolk Street	Cutler, Button and Box maker.
Hancock Joseph ...		1755	Sheffield, Union Street—High Street	Cutler, and maker of Plated Hollow-ware.
Smith Nathaniel ...	*	1756	Sheffield, Waingate ...	Cutler.
Law Thomas ...		1758	Sheffield, Baker's Hill ...	Silver Cutler & makers of Plated Hollow-ware and Candlesticks
Tudor & Leader ...		1760	Sheffield, Sycamore Works	Silver and Plate manufacturers.
Fenton Matthew & Co	†	1760	Sheffield, Mulberry St....	Do.
Unidentified ...		1760	Sheffield	Plate manufacturers
Unidentified ...		1760	Sheffield	Do.
Unidentified ...		1760	Sheffield	Do.
Hoyland John & Co.		1764	Sheffield, Union Street...	Silver and Plate manufacturers.
Boulton & Fothergill		1764	Birmingham	Do.
Roberts Jacob & Samuel	*	1765	Sheffield, Pond Hill ...	Silver and Plated Cutlery manufacturers
Winter John & Co.	†	1765	Sheffield	Silver and Plate manufacturers.
Morton Richard ...		1765	Sheffield, Brinsworth Orchard	Do.
Rowbotham J. & Co.	*	1768	Sheffield, Norfolk Street	Do.
Ashforth, Ellis & Co		1770	Sheffield, Holy Croft ...	Cutlers and Plate manufacturers.
Ryland William ...	No Mark Traced.	1770	Birmingham	Plater.
Littlewood J. ...		1772	Sheffield, Westbar Green	Plater and Silversmith.

* Marks used on plated and silver cutlery.
† It is only presumed that these marks were used by this firm.

Ryland William ...	... ...	Birmingham	Plater.

LIST OF MAKERS AND MARKS USED BY MANUFACTURERS OF FUSED PLATED AND CLOSE PLATED ARTICLES AFTER THE PASSING OF THE ACT OF 1784.

The words "close plater," given in this list, signify that the makers so described made articles plated on iron or steel. Marks struck on close plated articles can usually be identified by the splitting up or duplicating in various ways of the makers' names, initials, and devices, forming separate shields as and . Different forms of the letters s and P. S. were used to denote steel, or plated steel. The dates recorded are the earliest that can be traced of firms using their marks. The trade descriptions are taken from old manuscripts, ledgers and directories. Where a § is fixed against a device it signifies that this mark was not registered at the Sheffield Assay Office. The abbreviation "B. M." (in trade description) signifies Britannia Metal.
